Target Health Unveils Target Document® Version 1.4

Robust Document Management Solution for Clinical Trials

New York, NY June 22, 2009 – Target Health Inc., an industry-leading eCRO, announced the release of version 1.4 of Target Document®, its innovative document management software solution. This enhanced version of the company's proven document management software provides the pharmaceutical industry and CROs with a cost-effective, highly sophisticated, web-based, document management system that allows authorized users to view, download, and manage any document for their organization. Target Document features include: 1) Routing for electronic signatures; 2) Project templates; 3) Automatic email alerts; 4) Communication tools; 5) Document renewals; 6) User management; 7) Audit trail of transactions; 8) Recovery of deleted documents; 9) Archiving of projects; and 10) Compliance with 21CFR Part 11. According to Target Health's President, Dr. Jules T. Mitchel, "Target Document Version 1.4 was developed as one of the tools to allow Target Health to run a paperless clinical trial operation." Mitchel added that "the product was so successful for our company that we decided to allow others, including our competitors, to use it." Visit Target Health at Booth 2322 at this year's DIA meeting in San Diego.

About Target Health Inc.

Established in 1993, Target Health Inc. has been providing advanced clinical trial technology for more than a decade. As a full service CRO, the company is dedicated to all aspects of regulatory affairs, clinical research, biostatistics, data management, strategic planning, and drug device development. The company's client list is comprised of some of the most highly respected pharmaceutical companies as well as smaller biotechnology firms. Target Health is based in New York, NY. Target Health's software tools are designed to partner with both CROs and Sponsors, and include: Target e*CRF®, Target Document®, Target Encoder, Target Newsletter®, Target e*CTMS™, and Target e*Pharmacovigilance™.
