

**FOR IMMEDIATE RELEASE**

## **Target Health Unveils Target Document® Version 1.2**

*Newest version of the company's Internet-based Document Management and Document Sharing Software*

New York, NY July 22, 2007 – As part of the “Green Revolution,” with the ultimate goal of a truly paperless clinical trial, Target Health Inc., an industry-leading eCRO, has announced the the release of Target Document® version 1.2. Target Document® is a distributable, secure, user-friendly, 21 CFR Part 11 compliant, Internet-based, document sharing, distribution, and management system that allows users, depending on their roles and permissions, to post, share, electronically sign, search, and archive any electronic document within a Web browser. According to Jules Mitchel, MBA, Ph.D., President of Target Health, “Target Document® reduces the need to manage and distribute documents via email, saves paper and is ideal for CROs and Sponsors who want to transparently communicate among themselves, with vendors, study sites, CRAs, etc. Dr. Mitchel added that “Target Document® allows for a paperless Trial Master File (TMF) and is part of the paperless eClinical toolbox of products available from Target Health.” The Target Health toolbox includes: Target e\*CRF®, Target Health’s flagship EDC software, which has been used in over 150 clinical trials, some of which have been included in submitted and approved NDAs, PMAs, MAAs, and one BLA; Target Encoder® - which links directly into the Target e\*CRF® database to encode MedDRA and WHODRUG terms; Target e\*CTMS™ (Clinical Trial Management System)- which allows for Internet-based project management, across studies at one website ; and Target Newsletter® - which allows for a clinical trial newsletter with real time enrollment data and comments.

### **About Target Health Inc.**

Established in 1993, Target Health Inc. has been providing advanced clinical trial technology for more than a decade. As a full service CRO, the company is dedicated to all aspects of regulatory affairs, clinical research, biostatistics, data management, strategic planning, and drug device development. Its specialized advisors focus on the areas of toxicology, analytical methods validation, product and process development, quality assurance, and manufacturing. The company’s US and international client list is comprised of some of the most highly respected pharmaceutical companies as well as smaller biotechnology firms. Target Health is based in New York, NY.
